Investment objective

A conservative portfolio with an emphasis on capital preservation over capital appreciation during the full investment cycle, with a significant proportion of the portfolio held in the base currency aiming to achieve a reduced level of volatility. The Fund is ideally suited to investors with a low risk tolerance with an investment horizon of 3 years or longer. The Fund intends to achieve its investment objective through a diversified global portfolio primarily consisting of investments in participatory interests of portfolios of collective investment schemes or other similar schemes.

NAV to NAV figures have been used for the performance calculations. The performance is calculated for the Fund. The individual investor performance may differ, as a result of various factors, including the actual investment date. Investment performance calculations are available for verification upon request. Annualised returns are period returns re-scaled to a period of 1 year. This allows investors to compare returns of different assets that they have owned for different lengths of time. Actual annual figures are available to investors upon request. Peer group median: Morningstar USD Cautious Allocation.

* Please refer to the fund supplement and scheme particulars for a detailed description of fees and fund facts.

** The Total Expense Ratios (TERs) are the percentages of the net asset value of the class of the Financial Product incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. A current TER may not necessarily be an accurate indication of future TERs. The TER to 30.09.24 is based on data for the period from 30.09.23 to 30.09.24 and the financial year-end TER is based on data for the financial year-end to 30.06.24. Cost ratios are calculated using historical actual data and are provided solely as an indication/guide as to the annual expenses/costs that could be incurred. These ratios do not represent any current/actual charges or fees.

*** Current asset allocation figures reflect the strategic classification of the collective investment schemes (or similar schemes) held by the Fund and do not look through to the underlying holdings of such schemes.

Market commentary

December's market performance reflected the ongoing uncertainties heading into 2025. The Fed's anticipated 25bps rate cut materialised but was tempered by the quarterly dot plot projecting only two rate cuts for 2025 – half the number expected in September. Inflation forecasts were revised upwards, with the Fed's preferred PCE measure now seen at 2.5%. Fed Chair Powell reiterated the need for further progress on inflation before cutting rates further.

Forward indicators of activity were resilient in the US but weak in Europe and the UK, with recession risks rising in Germany and France due to structural problems and political instability. UK business confidence collapsed after October's tax-heavy budget, reviving stagflation fears with core inflation running at 3.3%, weekly earnings rising 5.2%, and growth falling into negative territory. China's policy shifts toward monetary easing and a more proactive fiscal policy provided some hope, though Trump's trade tariffs cast uncertainty.

Markets reflected these challenges with weakness across major asset classes. Global equities, measured by the MSCI World index, fell -2.6% in December and global emerging markets fell -0.1%, while the JPM Global Government Bond index declined -2.7%. Gold drifted lower after a strong year, and the US dollar surged 2.6% on a trade-weighted basis.

The most significant move was in bonds, with longer maturity yields rising sharply due to inflation fears, slower rate cuts, and concerns over rising government debt. The US 10-year Treasury yield ended the year at almost 4.6%, up 100bps since September's rate cut, while UK 30-year bond yields hit a 21st-century high of 5.13%, driven by stagflation concerns.

Uncertainty remains elevated as markets brace for President Trump's inauguration and the implementation of his policy agenda. Risks of policy missteps, sticky inflation, high US tariffs, high government debt levels and a deterioration in geopolitical tension points weigh heavily on the outlook, while high equity valuations, particularly in megacap tech stocks, add to investor caution.

The policy easing cycle is expected to continue, supporting equities, while the recent bond sell-off has improved fixed income valuations. Opportunities lie in US equities beyond megacap tech stocks and in markets outside the US where valuations are generally more attractive. The consensus expectation for continued US exceptionalism faces little opposition given Europe's and the UK's malaise and China's structural issues. However, opportunities outside the US could deliver relative outperformance as valuations align with economic realities. We remain cautiously constructive for 2025.

Impact of underlying manager costs

Underlying manager costs (per annum):

This will depend on the managers selected for inclusion in the Fund. Managers typically charge fees for investment management (which may include performance fees) and administration, among other costs.

Currently the cheapest manager costs 0.06% per annum and the most expensive manager costs 1.38% per annum. The overall cost of the current manager blend is 0.24%. The methodology for calculating these figures is described in the Total Expense Ratio footnote on page 1.

Risk warnings and important notes

Collective investments are generally medium to long-term investments. The value of units may go down as well as up and past performance is not necessarily a guide to the future. Collective investments are traded at ruling prices. Commission and incentives may be paid and, if so, would be included in the overall costs. All performance is calculated on a total return basis, after deduction of all fees and commissions and in US dollar terms. Forward pricing is used.

The Fund invests in other collective investments, which levy their own charges. This could result in a higher fee structure for the Fund.

Fluctuations in the value of the underlying funds, the income from them and changes in interest rates mean that the value of the Fund and any income arising from it may fall, as well as rise, and is not guaranteed.

Deductions of charges and expenses mean that you may not get back the amount you invested.

The fees charged within the Fund and by the managers of the underlying funds are not guaranteed and may change in the future.

Higher risk investments may be subject to sudden and larger falls in value in comparison to other investments. Higher risk investments include, but are not limited to, investments in smaller companies, even in developed markets, investments in emerging markets or single country debt or equity funds and investments in high yield or non-investment grade debt.

Notwithstanding ongoing monitoring of the underlying funds within the Fund, there can be no assurance that the performance of the funds will achieve their stated objectives.

The Fund will contain shares or units in underlying funds that invest internationally. The value of an investor's investment and the income arising from it will therefore be subject to exchange rate fluctuations.

Foreign securities may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information.

The Fund may contain shares or units in underlying funds that do not permit dealing every day. Investments in such funds will only be realisable on their dealing days. It is not possible to assess the proper market price of these investments other than on the fund's dealing days.

No borrowing will be undertaken by the Fund except for the purpose of meeting short term liquidity requirements. Borrowings will not exceed 10% of the net asset value of the Fund. For such purpose, the securities of the Fund may be pledged. No scrip borrowing will be allowed. The Cell is not permitted to enter into any form of borrowing or loan arrangement with other cells of the Company nor other collective investment schemes of the Manager.

While derivative instruments may be used for hedging purposes, the risk remains that the relevant instrument may not necessarily fully correlate to the investments in the Fund and accordingly not fully reflect changes in the value of the investment, giving rise to potential net losses.

Forward contracts are neither traded on exchanges nor standardised. Principals dealing in these markets are also not required to make markets in the currencies they trade, and the result that these markets may experience periods of illiquidity. Banks and dealers will normally act as principals and usually each transaction is negotiated on an individual basis.

The Manager has the right to close the Fund to new investors, in order to manage it more efficiently, in accordance with its mandate.

Investment in the Fund may not be suitable for all investors. Investors should obtain advice from their financial adviser before proceeding with an investment.

Investors are reminded that any forecasts and/or commentary included in this MDD are not guaranteed to occur, and merely reflect the interpretation of the public information and propriety research available to the Investment Manager at a particular point in time.
